

While- for

15 July 2025 15:44

c) Control Flow

Condition

① while

Step 1: Initialization

Step 2: Condition

Step 3: Operation

Block

initialize ✓

while cond : ✓

=
if cond :

=
else :

=
operation ✓

num = 0 6 <= 5 ? F / stop
1 <= 5
0 <= 5
while num <= 5 :
 ↓ T ↓ T
 print(num) → 0
 num += 1
 num = 0 + 1 ⇒ 1

Conditional Statement / keywords

① break : Stop execution

② continue : Skip execution

② continue : skip execution

③ pass : syntactically correct / pass logic

```
num = 1 ✓  
while num <= 10 : ✓  
    print(num)  
    if num == 5 :  
        break  
    num += 1 ✓
```

Nested while

```
initialize  
while cond :  
    =  
    while cond :  
        =  
        op ✓  
    op ✓
```

② For loop

```
for var in collection :  
    =
```

name = "Uwaish"
 0 1 2 3 4 5

start → first ele
end → last ele

```
for var in name :  
    print(var) → U  
                |
```

`print(var)` → `U`
|
`n`
